

**Kyoto University Southeast Asian Studies for Sustainable Humanosphere**  
**Short-term Scholarship**  
**2011**

Name Nguyen Van Minh

1. Research Title:

Methods to measure presence and density of primates.

2. Place: Kyoto University

Duration: (YYYY/MM/DD) 2011/January/28 ~ 2012/March/28

3. What are your findings or achievements during short-term scholarship in Kyoto?

I learned some methods in the study field of primates such as primate observation in natural forests and statistics. I also learned the way of writing a scientific article in the study field of primates in English. In Primate Research Institute, I had many opportunities to read more expert literatures such as books, journals, and reports that I could not approach in my University (Hue University of Agriculture and Forestry, Vietnam).

4. What are your plan, idea and problem to study abroad?

Before I left PRI, Kyoto University to come back Vietnam, I and Professor Yuzuru Hamada had a manuscript of my proposal for studying PhD in Japan, especially studying in PRI in near future. I am hoping that I will find out a scholarship of studying PhD as well as admission to study in Japan as soon as if possible.

5. What is the difference between before and after your visit to Kyoto on study abroad, international mutual understanding.

Of course, it is very different between before and after I visit to Kyoto (PRI). As I mentioned the above things, I got more knowledges from PRI, especially Professor Yuzuru Hamada's support during my staying in Japan. The differences are that I learned more new study methods, reading of literatures, and how to write a scientific paper in English.
